

ENERGY EFFICIENCY POLICY

The Olaine Chemical Plant BIOLAR has developed an Energy Efficiency Policy for the implementation and operation of the Company's Energy Management System, and the definition of general principles of activity aimed at improving energy efficiency and energy saving.

This Policy has been developed in accordance with the basic principles, rules and requirements of the "Energy Management System" ISO 50001.

The goal of the Energy Management System is the efficient use of all types of energy at the Company. Energy efficiency is the ability to achieve better results in production and achieve higher performance using analog technology or lower power consumption compared to the previous level. As part of the Energy Efficiency Policy, the Company evaluates energy efficiency as one of the most important criteria when introducing new technological equipment, renovation projects and new development projects.

This Energy Efficiency Policy expresses the Company's position in the field of energy efficiency and energy saving and is based on the following principles:

- Ensuring the functioning and continuous improvement of the Energy Management System (ISO 50001);
- Cost reduction through the rational use of energy resources and the introduction of advanced innovative energy efficient technologies;
- Ensuring accounting and control of consumption efficiency, as well as losses of energy resources;
- Planning and implementation of production activities, taking into account legislative requirements in the field of energy efficiency and energy saving;
- Continuous improvement of the energy performance of technological processes;
- Continuous improvement of energy efficiency, rational use of energy resources and their savings;
- Improving the process of energy saving management in the implementation of all types of production activities;
- Determination of responsibility for energy saving and energy efficiency improvement at all levels of management;
- Increasing the level of knowledge of the Company's employees in the field of energy efficiency and energy saving;
- Implementation of measures provided for by the Company's energy saving program;
- Involvement of all Company employees in active participation in energy efficiency and energy saving activities. Implementation of appropriate motivation measures, and systematic and advanced training of employees in the field of energy efficiency and energy saving;
- Monitoring the implementation of measures provided for by the Energy Saving Program through energy efficiency audits.
